

IIIT-H IT POLICIES

**International Institute of Information Technology,
Hyderabad.**

2023-v1.0

Internet usage policy:

Internet communication is done through a central proxy server for the entire campus. Content filtering is done using DNS level blocking. The proxy server is run in high availability mode to ensure uninterrupted internet access in case one of the servers fails.

The following ports are open by default, which are used by common applications and services

- TCP 80/443/8080/8443 - Web Services
- TCP 22 – SSH
- TCP 6660:6670,6697, 7000, 7011, 8001, 8081 – IRC
- TCP 993,995,587,25,110,143,465 – E-Mail related protocols (IMAP, POP3 etc.)
- UDP 123 - NTP
- UDP 1194 – OpenVPN

In order to access services running on ports that are filtered or blocked by the firewall, users must submit a help ticket (with faculty approval) indicating the reason for the request, the duration of the request, and the source and destination IP addresses.

The total bandwidth of the campus is balanced between two 1 Gigabit links (NKN and PGCIL). Hostels, Faculty Quarters and HPC/ADA use PGCIL, whereas Research Centers, Academic Blocks, and Labs use NKN. In an event that one of the ISP goes down, the traffic automatically switches over to the other ISP.

Each individual is allotted 50Mbps upload and download speed during the day and 100 Mbps during the night (23:00 – 7:00).

All packets going through the proxy and DNS queries made are logged. We only store the source IP, destination IP, and the corresponding ports. Logs are stored only for archival purposes and only used if any external complaint is received.
