

Internship Policy

The following note describes the internship policy of IIIT-H.

1. IIIT Hyderabad interprets internship in a broad manner and does not limit the scope of internship to just internship in an industry or organization. Internship can be done also by working in a research lab within IIIT-H or participating in similar activities within IIITH.
2. In addition, certain core courses are naturally interwoven with industry driven projects. One such example is the four-credit course on Design and Analysis of Software Systems in the fourth semester of the UG CSE curriculum. Each team of two students, in the class of nearly 200 students, do a semester long course project that is defined, mentored, and evaluated in part by an industry partner. The industry partner and the team work together towards the requirements gathering and specification, software design, implementation, testing, and so on to experience the entire software development life cycle.
3. In the summer months, students are encouraged to work as advisees in research laboratories across IIIT Hyderabad including the Product Labs. At present, IIIT Hyderabad has research laboratories in several technology domains, inter-disciplinary domains, applied domains, and trans-disciplinary domains. The Product Labs is a unique facility in IIIT Hyderabad that aims to translate research results into usable industry grade and society grade deployable products.
4. Students who want to work outside of IIIT Hyderabad during the summer months on internship are required to approach the Academic Office to obtain a No Objection letter that includes the start and end date of the internship.
