

April 2017

**Admissions into MPhil and PhD in Computational Linguistics
(for Language/Linguistics/Social Science background
students)**

Eligibility

Masters in Linguistics/Literature/Social Science

Programmes

MPhil in Computational Linguistics

PhD in Computational Linguistics

MPhil (Computational Linguistics)

MPhil (CL) is a two-year research oriented program that prepares students from humanities and social science background to enter the area of CL/NLP. The first year of the programme introduces the student to computational linguistics, and is also aimed at providing the necessary breadth and integrating the students with the instructional philosophy of IIIT. The subsequent semesters aim at providing avenues for specializing in one or more of the streams. All students are given research assistantships in terms of tuition fee, hostel fee and the work they put in for various projects.

Objectives

The aim of the program is to introduce students of humanities and social science background to the area of Computational Linguistics.

PhD in Computational Linguistics

PhD (CL) is a three to five year program which admits students from varying backgrounds, computer-science and non-computer science which includes science, humanities and social science.

There are two streams of students:

Stream 1

This stream consists of two sub-streams of students:

Stream 1A: Students coming from Computer science / technology

background

Stream 1B: Students coming from Science/Maths/ECE background or equivalent

Stream 2

Students coming from Linguistics, humanities and social science background belong to this stream.

Objectives

The goal of the programme is to give a general high level breadth in the area of Computational Linguistics and its related disciplines, and to carry out original in-depth research work on a problem in Computational Linguistics.
